EDUCATIONAL LEVEL OF NEW MEXICO’S WORKFORCE PROJECTED TO DECLINE

Income of Residents Would Drop as a Result

The average level of education of New Mexico’s workforce and the income of its residents are projected to decline over the next two decades, unless the state can increase the number of Hispanics/Latinos and Native Americans going to college and getting degrees. This supplement describes the basis for these projections.

FACT #1: New Mexico’s workforce continues to become more racially diverse.

The share of New Mexico’s workforce consisting of whites (particularly those under age 45) is declining rapidly, while the share made up of other racial/ethnic groups is projected to reach 59% by 2020 (see figure 1). The growth is almost completely within the Hispanic/Latino population, whose share of the workforce is expected to jump from 32% in 1980 to 47% in 2020.

This Policy Alert Supplement takes a closer look at how these trends would affect New Mexico.

This analysis is based on the recent report, As America Becomes More Diverse: The Impact of State Higher Education Inequality, by Patrick J. Kelly at the National Center for Higher Education Management Systems (NCHEMS), with support from the Lumina Foundation. For the full report, see www.higheredinfo.org/raceethnicity/.

The national Policy Alert and 10 state supplements can be downloaded from the National Center’s Web site at www.highereducation.org.
FACT #2: Hispanics/Latinos are the fastest-growing racial/ethnic group in New Mexico. Along with Native Americans, they have the lowest levels of education in the state.

The gaps between the educational levels of whites and Hispanics/Latinos, and whites and Native Americans, are substantial. For example, there is a wide disparity between the least-educated and the highest-educated segments of the state workforce (see figure 2). Among working-age adults, about 31% of Hispanics/Latinos and 26% of Native Americans do not have a high school credential, compared to 7% of whites. At the other end of the spectrum, only 17% of working-age Hispanics/Latinos and 17% of working-age Native Americans have a college degree, compared with 44% of working-age whites.

IMPACT: Given the demographic shifts in the state workforce, IF New Mexico’s current educational gaps among racial/ethnic groups remain, then...

★ The percentage of the workforce with a college degree is projected to decline: By 2020, the share of the workforce with less than a high school diploma is projected to increase, while the share with an associate’s or a bachelor’s degree is projected to decrease (see figure 3).

★ The income of residents is projected to drop: IF the average educational level of the state workforce declines, New Mexico’s personal income per capita is projected to drop from $17,281 in 2000 to $17,123 in 2020—a decline of $158 or 1% (in inflation-adjusted dollars). In contrast, according to the Bureau of Economic Analysis, New Mexico’s personal income per capita had grown 27% during the two decades prior to 2000. One consequence of such a decline in personal income would be a decrease in the state’s tax base.

Policy Implications.

State policymakers in New Mexico must be aware of the social and economic costs resulting from demographic shifts and disparities in the education of the state’s residents. New Mexico’s opportunities to develop a strong state workforce that can compete effectively in a global, knowledge-based economy rest on its ability to raise the level of education of all its residents, particularly its Hispanic/Latino and Native American populations.
